

ENVIRONMENTAL PROTECTION AGENCY ACTIVITIES
STATUS OF MARTHA C. ROSE CHEMICALS, INC. SITE
IN HOLDEN, MISSOURI

December 10, 1986

SITE:	<i>Rose Chemicals</i>
ID#:	<i>MOD980633069</i>
DATE:	<i>1.1</i>
OTHER:	<i>12-10-86</i>
<i>078D</i>	

1. Legal Activities

A CERCLA Section 106 Administrative Order on Consent has been entered into by 13 generators, Lear Siegler, Inc. and the city of Holden. Pursuant to this order, work plans were submitted on December 10. Much of the work to secure and stabilize the site and contain PCB releases has already been undertaken by the companies.

By December 12, notice letters will have been sent to approximately 650 generators. These letters outline provisions of CERCLA and potential liability for cleanup activities. Other potentially responsible parties are still being identified.

2. Remedial Activities

None have been undertaken at this time. Proposed response activities are being formalized through work plans which were submitted by the generator on December 10 under the Administrative Order on Consent.

3. Immediate Removal Activities

Contaminated soil has been removed from the Hayes subsite and sample results indicate the area is below the PCB level of concern. All known contaminated materials have been removed from the facility at 2429 Charlotte. Some additional cleaning is required at the Huhn property subsite.

4. Ultimate Site Cleanup

Representatives of the generator group's technical committee met with regional staff on December 8 for further discussions on site cleanup.

5. Accumulated PCB Sludge at Holden, Missouri

The sludge has been solidified by mixing with kiln dust and can be disposed of in an approved sanitary landfill. Inquiries about disposal are being made to landfill operators in the area.
